UNITS OF MEASUREMENT AND DIMENSIONS

Metric measurements are to the nearest practical equivalent of Imperial. Exhibitors will have the advantage where there are slight discrepancies between the two scales.

Weights

With the many makes of honey jar available and their varying weights (up to 20g in some cases) the only way of the judge being certain that the jar contains 454g (1lb) of honey is if there is no air gap visible between the surface of the honey and the lower edge of the lid.
